A T300 scrubber was used for this analysis. The life-cycle analysis was performed using version 6 of the GaBi Life-Cycle Software. Secondary data from GaBi and Ecoinvent datasets, supplemented by proprietary Ecoform data sets, comprised the entirety of the life-cycle inventory data.

ENVIRONMENTAL FOOTPRINT REDUCTION QUESTIONS & ANSWERS

WHAT IS A LIFE-CYCLE ANALYSIS?

Life-cycle analysis is a methodology used to identify and quantify the environmental impacts of a product, service, or activity, across its life-cycle. The scope of the study included the items listed in the diagram to the right:

WHO PERFORMED THE LIFE-CYCLE ANALYSIS?

Jack Geibig, president of Ecoform, LLC, an independent company that focuses on the environmental performance of companies and their products and processes.

IMPACT CATEGORY	REDUCTION OF	CREATED BY	HARMFUL TO
ACIDIFICATION	kg SO ₂	Combustion processes in electricity and heating production and transportation	Fish and forests, by lowering the pH of water and soil
CO ₂ EMISSIONS	kg CO ₂	Combustion of fossil fuels	Atmosphere (global climate change)
ENERGY	MJ	Total energy required to manufacture and use product	Atmosphere (global climate change)
EUTROPHICATION	kg PO ₄	Nutrients from discharged waste water and fertilized farmland	Fish and other life in the aquatic ecosystem, due to oxygen deficiency
OZONE DEPLETION	g CFC	Emission of halocarbons	Humans, causing increased frequency of skin cancer and damage to plants
PARTICULATE	kg PM _{2.5}	Combustion of materials	Human respiratory systems, resulting in chronic respiratory illness
SMOG	kg NO _x	Reduction of VOCs and nitrogen oxides in the presence of heat and sunlight	Human respiratory systems, resulting in respiratory illness including chronic bronchitis and emphysema
