

Technical Service Bulletin

PRODUCT(S) **3620 Sweeper**
AFFECTED:

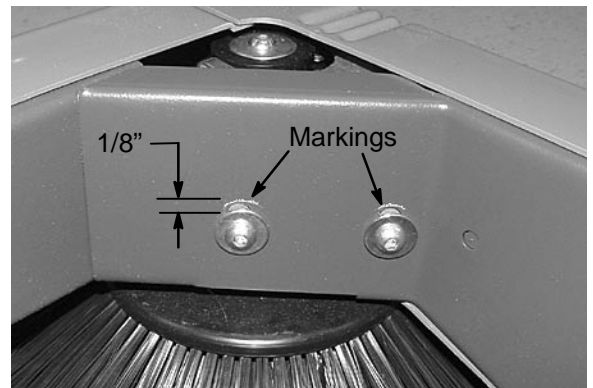

SUBJECT: Side Brush Adjustment – During machine installation, the side brush support bracket must be adjusted down from the shipping position.

PURPOSE: To achieve optimum performance and to prevent potential damage to side cover. Follow the Side Brush Adjustment instructions as described below.

NOTES: This procedure will be factory performed in the near future. Contact the Custom Service Department at 1-800-982-7658 or (616) 786-2330 with questions.

Side Brush Installation and Adjustment:

1. Switch the side brush lift lever to the OFF position and remove the key.
2. Tilt machine back and remove the screw and washer from the side brush drive shaft.
3. Position the brush on the shaft and replace the washer and screw using a 10mm wrench.
7. Loosen both screws using a 5mm Allen Wrench.
8. Lower the Side Brush down a minimum of 1/8". Use the reference marks to measure the movement.

4. Remove the front Hopper.
5. Locate the two adjustment screws on the inside right front corner.
6. Using a scribing tool, etch a small mark around the top edge of both flat washers. These marks will be used as reference points.
9. Re-check adjustment and tighten both screws.
10. Replace Hopper and test the side brush for proper operation.
