**TITLE:
BRUSH DOWN LIMIT KIT**

**APPLICABLE MACHINES:
530E**

SYNOPSIS:

Chain case “drags” on the floor because of a worn-out brush.

If the bristle length is 1/2” or less, the chain case will start dragging on the floor, causing serious problems. To prevent this, install the down limit kit, TENNANT part number 12510. This kit will stop the brush chain case at a pre-set point so it will not drag on the floor.

For additional protection, the Specials Dept. has developed a skid plate kit that can be installed between the gearbox and the cover. The part number for this kit is SP01818. Besides this kit, you must also order 2 gaskets that go on either side of the plate. The part number for the gasket is 86276.
